
Global Product Management Specialist (f/m/d) – Contactors and Motor Starting Solutions

Location Heidelberg

In this position as Product Specialist, you will report to and support the Global Product Manager to optimize the product portfolio and return on investment in the field of Contactors and Motor Starting Solutions. You will ensure that ABB has a full understanding of market requirements in the specific area and is able to transform these requirements into product/system specifications and development activities. The related product portfolio is a part of the Global Product Group “Motor Starting and Safety”, Smart Power Division.

Your responsibilities

- Following and understanding global standards, markets and customer requirements and conducting competitor analyses including identification of product gaps evaluation of the ABB position
- Continuous monitoring of the existing portfolio
- Managing the technical specification of product assigned and support the Global Product Manager in developing business cases for product developments, maintenance, and cost reduction
- Collecting and analyzing standards, market requirements, customer needs and values as an input for producing a product roadmap
- Owning, monitoring, and delivering on the agreed product development roadmap, ensuring timely and successful launches
- Close collaboration with other functions within relevant factories and the global product group, especially with other Motor Starting and Safety Product Specialists
- Keeping Global Product Group, sales and channels informed on topics related to the product, such as new product availability, market, competition, quality, configuration, trends, and limitations
- Embedding sustainability and circularity principles in everyday activities as both the right thing to do and a business opportunity
- Supporting our customers with technical issues and to become more environmentally sustainable and creating new market opportunities

Your background

- A bachelor or master's degree in Electrical Engineering, Mechatronics or Industrial Engineering
- At least 2 years' experience in product management or sales role working in electrification business and having experience about relevant products such as Contactors or Motor Protection Devices
- Professional English-speaking skills are required, knowledge in German is beneficial
- A collaborative, solution-focused approach, with strong communication and relationship-building skills
- Willingness to work in an innovative, creative, multicultural, and agile environment
- Self-motivation and team-oriented working approach
- Attention to customers and stakeholders, result oriented, markets driven thinking, teamwork, systemic thinking, innovation
- Willingness to travel
